

# **1. INTRODUCTION**

## **1.1. Project Overview**

The Gemini Historical Artifact System is a digital platform designed to preserve, manage, and provide access to historical artifacts from the Gemini space missions. These artifacts include spacecraft components, mission records, astronaut equipment, photographs, and other important historical materials. Many of these valuable artifacts are stored in physical form, making them vulnerable to damage, deterioration, and loss over time.

The system allows archivists and administrators to upload, update, and maintain artifact records, while researchers, students, and educators can easily search and access artifact information through a user-friendly interface.

The Gemini Historical Artifact System also helps protect space exploration heritage and ensures that valuable historical information is preserved for future generations. By using digital technologies, the system improves artifact accessibility, enhances preservation efforts, and supports learning and research activities related to Gemini space missions.

## **1.2. Objectives**

The main objectives of the Gemini historical artifact description project are:

- To Store artifact information such as mission details, images, and descriptions in a secure system.
- To Allow researchers, students, and educators to search and view artifact data efficiently.
- To Provide accurate artifact information to help research and learning about Gemini space missions.
- To Enable archivists and administrators to upload, update, and maintain artifact records.

## 2. IDEATION PHASE

### 2.1. Problem Statement

I am a student, researcher, or museum curator trying to identify, analyze, and understand historical artifacts accurately, but there is no easy and fast way to get detailed and reliable artifact descriptions because artifacts require expert knowledge, historical context, and manual research, which makes me feel confused, slow in learning, and limited in accessing accurate historical information.

**Example:**

<b>I am</b>	<small>Describe customer with 3-4 key characteristics - who are they?</small>	Describe the customer and their attributes here
<b>I'm trying to</b>	<small>List their outcome or "job" the care about - what are they trying to achieve?</small>	List the thing they are trying to achieve here
<b>but</b>	<small>Describe what problems or barriers stand in the way - what bothers them most?</small>	Describe the problems or barriers that get in the way here
<b>because</b>	<small>Enter the "root cause" of why the problem or barrier exists - what needs to be solved?</small>	Describe the reason the problems or barriers exist
<b>which makes me feel</b>	<small>Describe the emotions from the customer's point of view - how does it impact them emotionally?</small>	Describe the emotions the result from experiencing the problems or barriers

<b>I am</b>	<b>I'm trying to</b>	<b>But</b>	<b>Because</b>	<b>Which makes me feel</b>
A researcher	identify and understand historical artifacts accurately	traditional identification methods are slow and require expert knowledge	artifacts need detailed analysis, historical context.	confused, inefficient, and limited in accessing accurate historical
I am a Museum Curator	I'm trying to preserve and manage Gemini historical	But there is no secure and efficient digital system to store	Because traditional storage methods	Concerned about losing valuable historical artifacts and information

## 2.2. Empathy Map Canvas

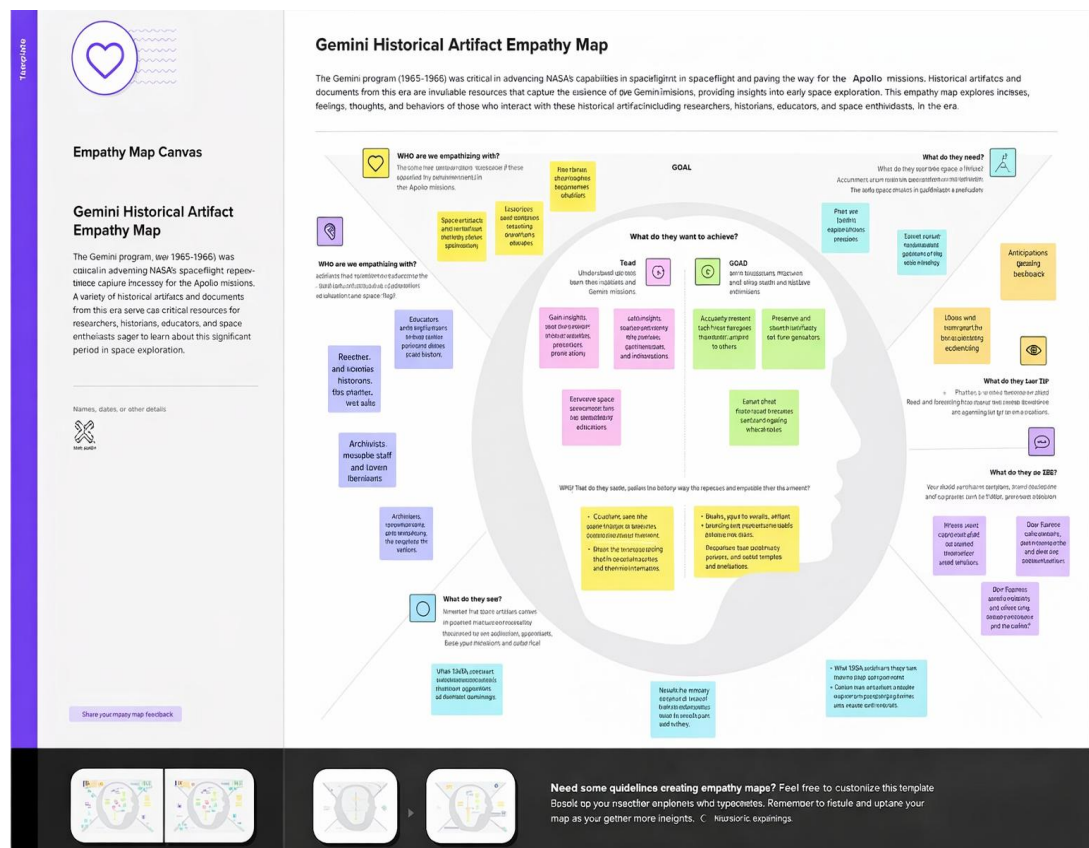

### Empathy Map Canvas:

The Gemini Historical Artifact Empathy Map focuses on understanding the needs, experiences, and motivations of historians, researchers, archivists, and space enthusiasts who interact with artifacts from the Gemini space program. These individuals are deeply committed to preserving and documenting important spacecraft components, mission records, photographs, and astronaut equipment that represent a crucial phase in space exploration history.

#### Example:

## Example: Gemini historical artifact description

## 2.3 Brainstorming

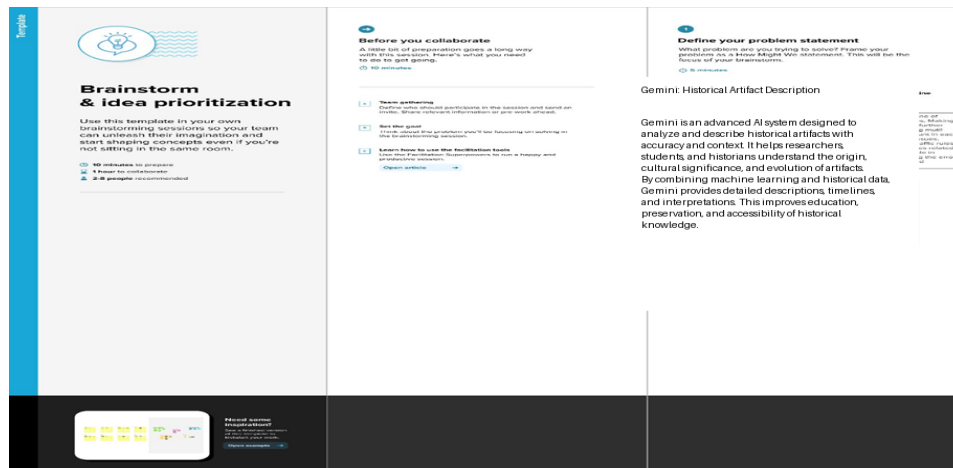

### Brainstorm & Idea Prioritization:

#### Brainstorming for “Gemini historical artifact description”:

Brainstorming for the project “Gemini Historical Artifact Description” focuses on exploring how artificial intelligence can help identify, analyze, and describe historical artifacts accurately. The main goal of this brainstorming session is to generate ideas on how Gemini can assist students, researchers, and museums in understanding the origin, cultural significance.

Gemini can solve this problem by using image analysis and natural language processing to examine artifact images and automatically generate detailed descriptions, including information about the artifact’s time period, material, origin, and cultural importance.

#### Step-1: Team Gathering, Collaboration and Select the Problem Statement:

## Step-2: Brainstorm, Idea Listing and grouping:

### 2 Brainstorm – Gemini Historical Artifact System

Write down any ideas that come to mind that address your problem statement.

⌚ Time: 10 minutes

**TIP** You can label sticky notes by color or category to help you group your ideas.

Person 1 Archivist	Researcher	Person 3 Student	Student	Person 4 Writers
Digitize Gemini historical artifacts	Provide searchable artifact database	Learn about Gemini space missions	Learn about Gemini space missions	Upload artifact records digitally
Store artifact images and mission records	Access artifact mission details easily	Access artifact mission details	Use artifact data for education	Maintain artifact documentation
Track artifact preservation status	Support historical research	Support historical research	Improve space history awareness	Protect historical artifacts

Person 5 Administrator	Administrator	Developer	Educator	Space Agency Staff
Manage artifact database security	Build user-friendly interface	Implement artifact search system	Use artifacts for teaching	Preserve space mission heritage
Control user access	Control user access	Integrate cloud storage	Provide educational resources	Maintain artifact archive
Maintain artifact records	Maintain system performance	Improve system performance	Support space education	Share artifact data globally

### 3 Group Ideas – Gemini Historical Artifact System

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence label title. If a cluster is bigger than sticky notes, try and see if you can break it up into smaller sub-groups.

⌚ 20 minutes

#### Group 1 : Artifact Preservation

- Digitize artifacts
- Prevent deterioration
- Track preservation status
- Maintain artifact records

#### Group 2 : Artifact Database Management

- Store artifact data securely
- Manage artifact information
- Maintain artifact storage
- Maintain cloud storage

#### Group 3 : Artifact Access and Search

- Search artifact details and images
- View artifact details and images
- Easy access for researchers and students
- Online artifact system

#### Group 4 : Research and Education Support

- Support historical research
- Provide educational resources
- Improve learning and awareness
- Help researchers and educators

#### Group 5 : System Management and Security

- Secure artifact data
- Manage user access
- Maintain system performance
- Maintain system performance

## Step-3: Idea Prioritization:

### 4 Prioritize – Gemini Historical Artifact System

Your team should focus on the most important and feasible ideas for preserving Gemini historical artifacts.

⌚ 30 minutes

**TIP** Prioritize ideas by discussing and placing sticky notes on the graph. Focus on ideas with high importance and high feasibility.

**Importance** (How valuable the idea may be for the project, mission, and feasibility)

**Feasibility** (How likely the idea is to be implemented)

High Importance + High Feasibility	High Importance + Medium Feasibility	Medium Importance + High Feasibility
<ul style="list-style-type: none"> <li>Implement artifact preservation monitoring system</li> <li>Track artifact condition and preservation status</li> <li>Maintain preservation history</li> </ul>	<ul style="list-style-type: none"> <li>Implement artifact preservation monitoring</li> <li>Track artifact condition and preservation status</li> <li>Maintain preservation history</li> </ul>	<ul style="list-style-type: none"> <li>Create centralized digital artifact database</li> <li>Store artifact name, mission details, images, and preservation status</li> <li>Provide secure and easy access</li> <li>Provide artifact search and viewing system</li> <li>Allow users to search artifacts by mission, astronaut, or artifact name</li> <li>Display artifact information clearly</li> </ul>

### 4 After you collaborate

Select the most important and feasible solution: **Centralized Gemini Historical Artifact Digital Preservation System**

#### Create system prototype (MVP)

- Artifact upload and storage
- Artifact search and display
- Allow remote access
- Artifact management system
- Artifact management system

#### Future improvements

- Artifact condition monitoring
- Cloud integration
- Advanced artifact analysis
- Artifact artifact analysis

## 3. Requirement Analysis

### 3.1. Solution Requirement

#### Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Artifact Data Management	Upload and store Gemini historical artifact information including name, mission, description
FR-2	Artifact Search and Retrieval	Allow users to search and retrieve artifact information quickly and accurately
FR-3	Artifact Preservation Tracking	Track artifact condition, preservation status, and storage details
FR-4	User Management, access, and maintenance	Allow system administrator to manage users to control

#### Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

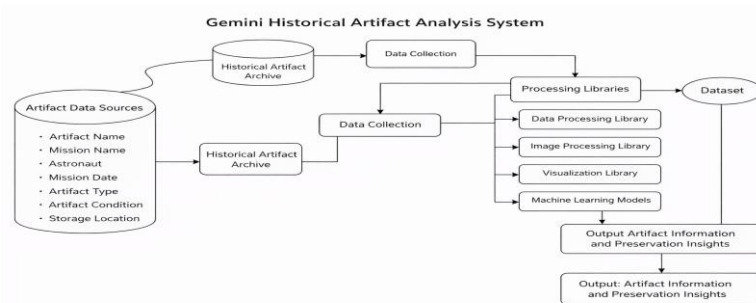

FR No.	Non-Functional Requirement	Description
NFR-1	<b>Usability</b>	The system shall provide a simple and user-friendly interface that allows users to easily search and view artifact information
NFR-2	<b>Reliability</b>	The system shall consistently store and retrieve artifact data accurately without data loss
NFR-3	<b>Performance</b>	The system shall display artifact information
NFR-4	<b>Availability</b>	The system shall be available and operational during research and educational usage

## 3.2. Data Flow Diagram

### Data Flow Diagrams:

The Gemini Historical Artifact Analysis System is designed to collect, store, process, and analyze historical artifacts from the Gemini space missions. The system begins with artifact data sources, which include important information such as artifact name, mission name, astronaut, mission date, artifact type, artifact condition, and storage location.

### Flow Diagram:

### User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Archivist	Artifact Data Management	USN-1	As an Archivist, I want to upload and store Gemini historical artifact information	System allows artifact upload with name, mission, description, and images. Data is stored securely.	High	Sprint-1
Researcher	Artifact Search and Access	USN-2	As a Researcher, I want to search and view Gemini historical artifacts	System provides accurate artifact search results. Artifact details and images are displayed clearly.	High	Sprint-1
Student / Public User	Artifact Viewing	USN-3	As a Student, I want to view artifact information so that I can learn about Gemini space	Artifact information is displayed clearly. Images and mission details are accessible.	Medium	Sprint-2
System Administrator	Artifact Database Management	USN-4	As an Administrator, I want to manage artifact records so that the system remains accurate and secure.	Admin can add, edit, and delete artifact records. System maintains data integrity.	High	Sprint-1
Museum Curator	Artifact Documentation	USN-5	As a Curator, I want to document artifact present	System allows preservation status updates.	High	Sprint-2

### 3.3. Technology Stack

#### Technical Architecture:

The Deliverable shall include the architectural diagram as below and the

**Table-1 : Components & Technologies:**

S.No	Component	Description	Technology
1.	User Interface	Critical element designed for both Traffic Managers and everyday users, ensuring an intuitive and informative experience.	HTML, CSS, JavaScript
2.	Application Logic-1	Involves a robust backend system responsible for processing, analyzing, and managing traffic data.	Python
3.	Database	Involves the storage and management of diverse traffic data for analysis.	File Manager, csv
4.	File Storage/ Data	Involves managing diverse types of data, including raw traffic data, models, and configuration files.	Local System, Google Drive
5.	Frame Work	It is a crucial part of our program as it is responsible for connecting the frontend with the backend.	Python Flask

**Table-2: Application Characteristics:**

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	Open-source frameworks can accelerate development and ensure the reliability of Gemini.	Python's Flask
2.	Scalability	Using cameras to collect data and to make models for specific locations.	Computer vision, dynamic databases.
3.	Performance	Regular performance testing, monitoring, and optimization are integral components of the development and maintenance process	R squared, Root mean squared error, Root Mean Square deviation
4.	Availability	Website can be made available all time in a webserver. This makes the website running without any issues	High speed Linux based webserver.

## 4. PROJECT DESIGN

### 4.1. Problem Solution Fit

#### Problem – Solution Fit Template:

The Gemini Historical Artifact System addresses the critical problem of preserving and managing historical artifacts from the Gemini space missions. Many valuable artifacts, documents, and mission records are stored in physical form, making them vulnerable to deterioration, damage, and loss over time.

#### Purpose:

- ☐ To digitally preserve Gemini historical artifacts and prevent loss or deterioration.
- ☐ To store artifact information such as mission details, images, and descriptions in secure database.
- ☐ To provide easy access to artifact information for researchers, students, and educators.
- ☐ To support historical research and educational activities related to Gemini space missions.

#### Template:

Buyer: Gain & Retain CSF – Gemini Historical Artifact System			
<b>1. CUSTOMER SEGMENT(S)</b> <span>CS</span> <ul style="list-style-type: none"> <li>Space historians and researchers</li> <li>Museum curators and archivists</li> <li>Space agencies (NASA and research institutions)</li> <li>Students and educators</li> <li>Space enthusiasts and digital archive users</li> </ul>	<b>2. JOBS-TO-BE-DONE / PROBLEMS</b> <span>JP</span> <ul style="list-style-type: none"> <li>Preserve and maintain Gemini historical artifacts digitally</li> <li>Access artifact information for research and education</li> <li>Manage and organize artifact records efficiently</li> <li>Prevent loss or deterioration of historical data</li> <li>Provide easy access to artifact information</li> </ul>	<b>6. CUSTOMER CONSTRAINTS</b> <span>CC</span> <ul style="list-style-type: none"> <li>Limited funding for artifact preservation</li> <li>Lack of technical infrastructure</li> <li>Limited access to original artifacts</li> <li>Need for secure and reliable storage</li> </ul>	
<b>3. TRIGGERS</b> <span>TR</span> <ul style="list-style-type: none"> <li>Need to preserve aging historical artifacts</li> <li>Increasing demand for digital access to space history</li> <li>Research and educational requirements</li> <li>Museum digitization initiatives</li> <li>Space heritage preservation programs</li> </ul>	<b>5. ## 4.2. Proposed Solution

### Proposed Solution Template:

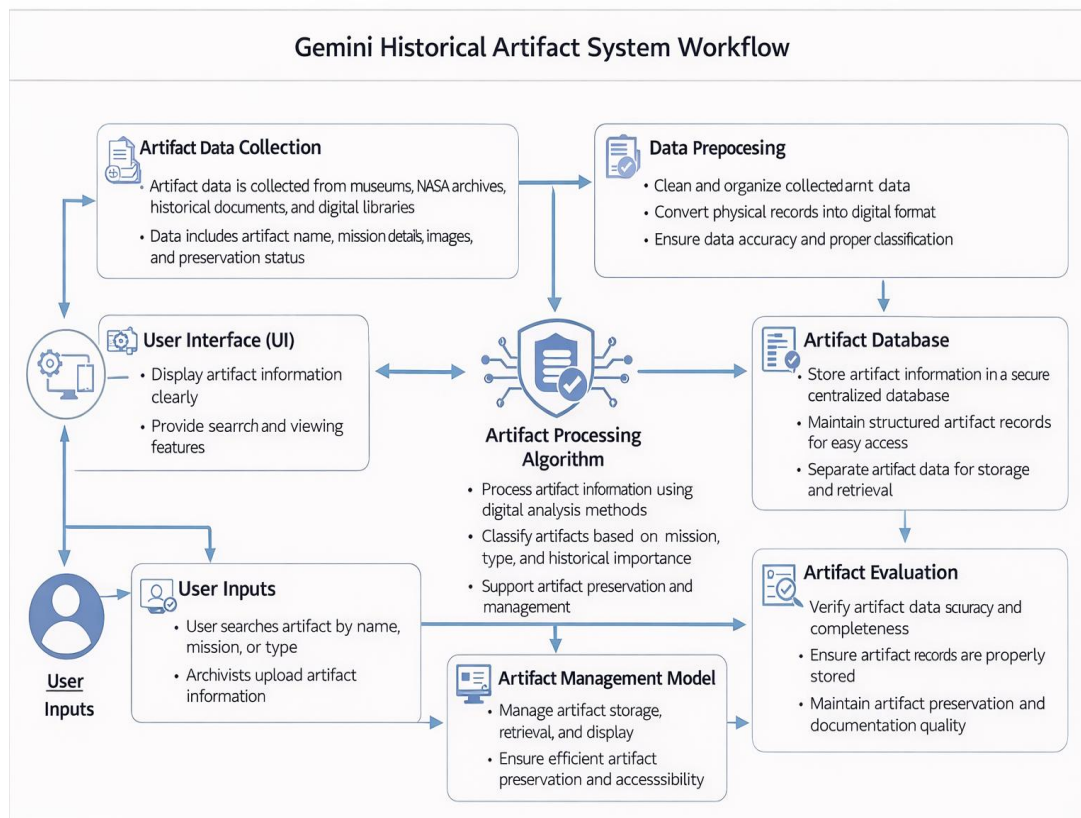

Project team shall fill the following information in the proposed solution template.

S.No	Parameter	Description
1.	Artifact Data Collection	Collect artifact information from museums, NASA archives, historical documents, and digital libraries Gather artifact name, mission details, images, and descriptions
2.	Data Processing	Convert collected artifact data into digital format and organize it properly Ensure artifact data is structured, accurate, and ready for storage
3.	Artifact Database	User interface to display artifact information Show artifact name, mission details, images, and preservation records
4.	Artifact Search System	Convert collected artifact data into digital format and organize it properly Ensure artifact data is structured, accurate, and ready for storage
5.	Artifact Display Module	User interface to display artifact information Show artifact name, mission details, images, and preservation records
6.	User Management System	Manage users such as researchers, students, and administrators Control access and ensure system security
7.	Preservation Monitoring	Track artifact condition and preservation status Help maintain and protect artifact information

## 4.3 Solution Architecture

### Solution Architecture:

The solution architecture of the Gemini Historical Artifact System is designed to digitally preserve, manage, and provide access to historical artifacts from the Gemini space missions. The system begins with artifact data collection from various sources such as museums, NASA archives, historical documents, and digital libraries. This data is then processed and converted into digital format to ensure accuracy and proper organization.

## 5. PROJECT PLANNING & SCHEDULING

### 5.1. Project Planning

#### Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	User Interface Setup	USN-1	As a user, I can access a Streamlit-based interface to enter a recipe topic and word count.	2	High	All Team Members
Sprint-1	Input Validation	USN-2	As a user, I want the application to validate my inputs before generating the recipe.	1	High	All Team Members
Sprint-2	AI Model Integration	USN-3	As a user, I want the system to generate a recipe blog using the Gemini Flash Lite model.	3	High	All Team Members
Sprint-2	Joke Generation	USN-4	As a user, I want to see a programming joke while the recipe is being generated.	1	Medium	All Team Members
Sprint-3	Output Display	USN-5	As a user, I want to view the generated recipe blog clearly on the screen.	2	High	All Team Members
Sprint-3	Deployment	USN-6	As a user, I want the application to be deployed and accessible through the internet.	2	Medium	All Team Members

#### Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Complete	Sprint Release Date (Actual)
Sprint 1	20	4 Days	28 January 2026	31 January 2026	20	31 January 2026
Sprint 1	20	4 Days	28 January 2026	31 January 2026	20	31 January 2026
Sprint 2	20	8 Days	02 February 2026	09 February 2026	20	09 February 2026
Sprint 2	20	8 Days	02 February 2026	09 February 2026	20	09 February 2026
Sprint 3	20	7 Days	12 February 2026	18 February 2026	20	18 February 2026
Sprint 3	20	7 Days	12 February 2026	18 February 2026	20	18 February 2026

## 6. FUNCTIONAL AND PERFORMANCE TESTING

### 6.1 Performance Testing

#### Test Scenarios & Results:

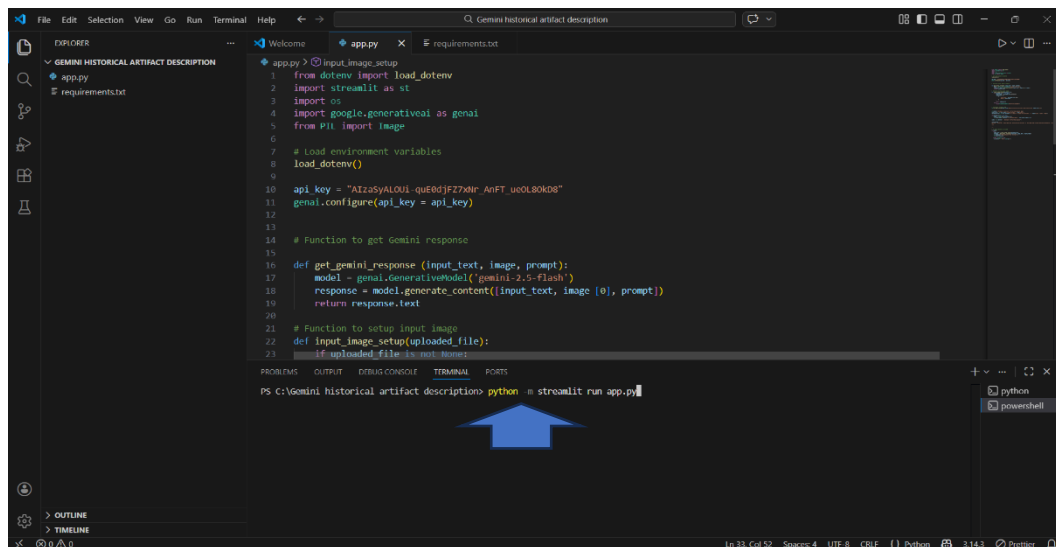

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Recipe Topic Input Validation	Enter valid recipe topic and leave field empty	Valid input accepted, error shown for empty input	As Expected	Pass
FT-02	Ingredient Input Validation	Enter valid ingredients and try empty/invalid inputs	Accepts valid input, shows warning for invalid input	As Expected	Pass
FT-03	AI Recipe Generation	Enter recipe topic and click "Generate Recipe"	Structured recipe with title, ingredients, and steps generated	As Expected	Pass
FT-04	Gemini API Connection Check	Trigger recipe generation with valid API key	API responds successfully and generates recipe	As Expected	Pass
FT-05	Programming Joke Feature	Generate recipe and check joke display	Programming joke appears along with recipe	As Expected	Pass
PT-01	Response Time Test	Measure time after clicking generate	Recipe generated within 3–5 seconds	Within Limit	Pass
PT-02	Multiple Request Handling	Generate multiple recipes sequentially	Application handles requests without crash	Stable	Pass
PT-03	Deployment Test	Access deployed app via browser	Application loads and works correctly online	Working	Pass

## 7. RESULTS

### 7.1. Output Screenshots

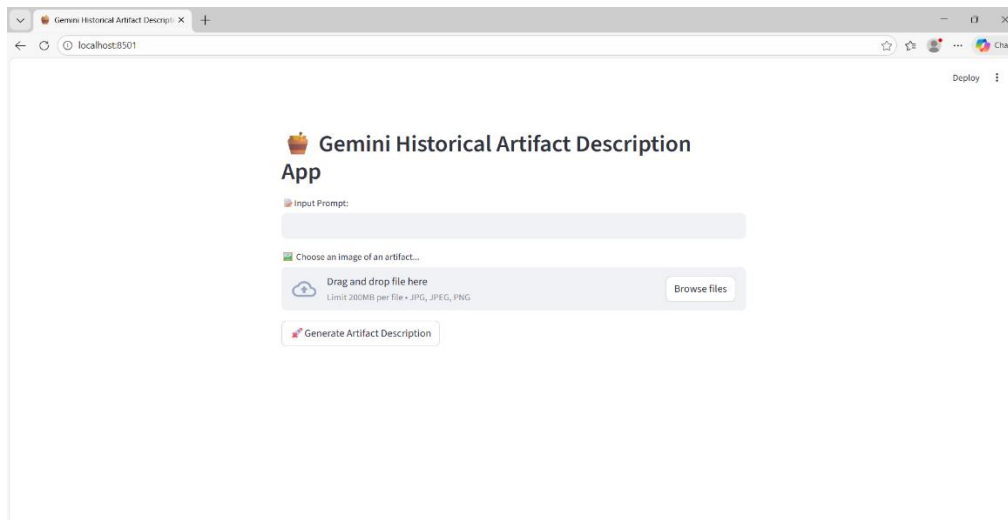

The complete execution of Gemini historical artifact description is represented step by step in the following screenshots.

**Step 1:** To run the Streamlit Application we have to use the command `python streamlit run app.py` in the terminal in path where the `app.py` file is located.

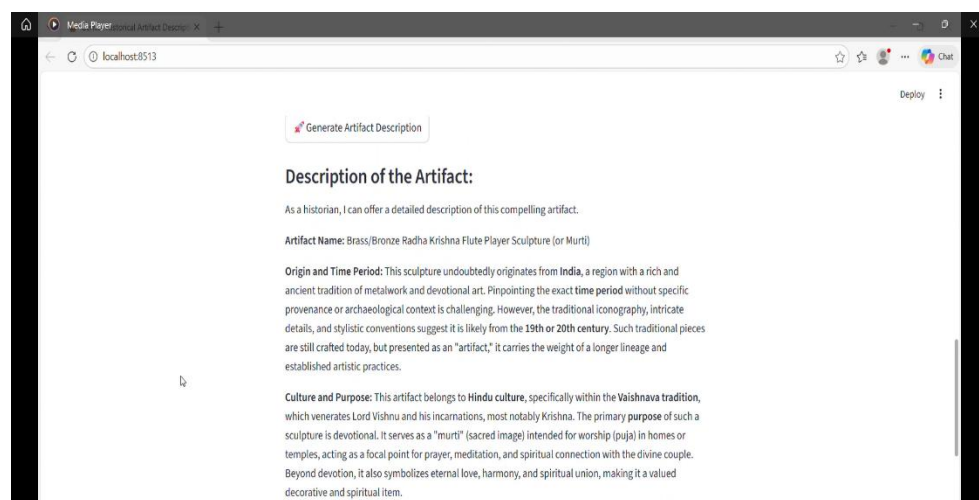

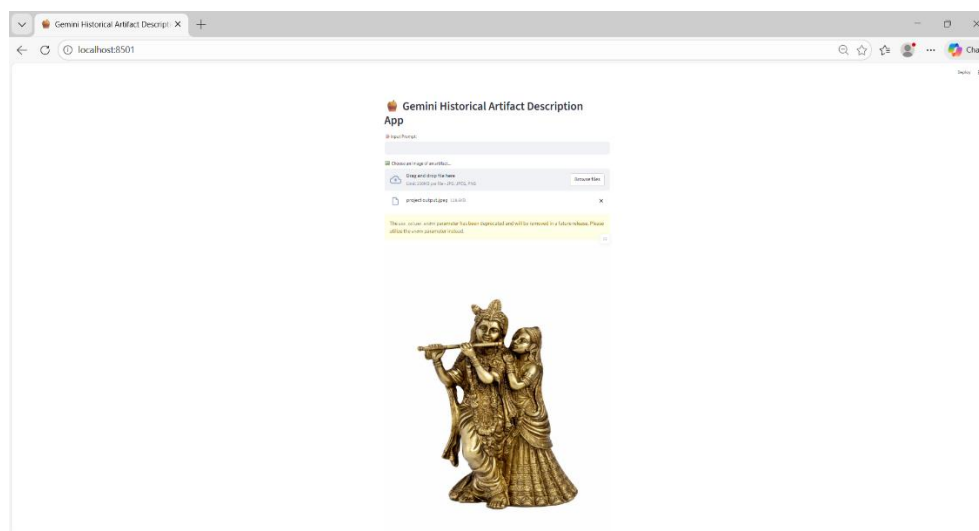

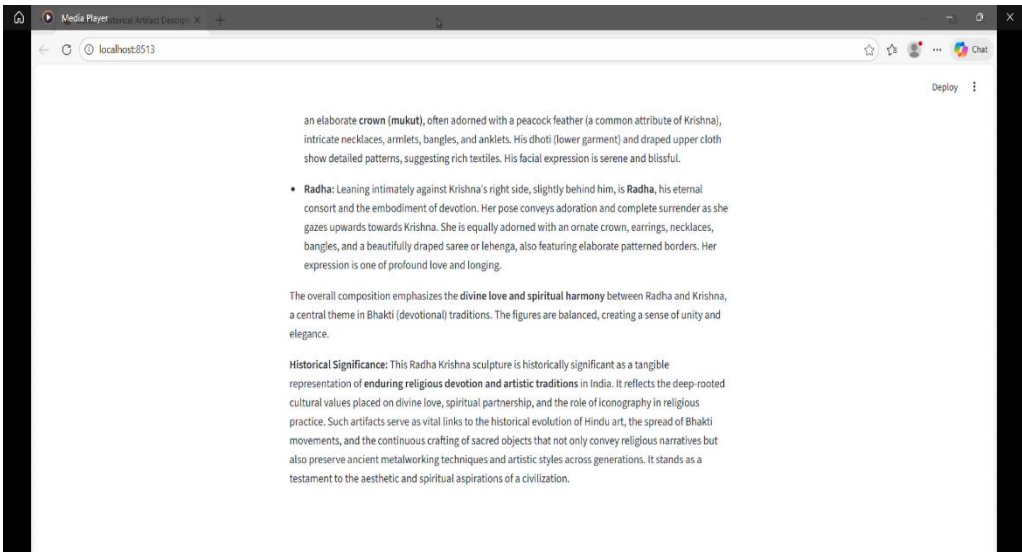

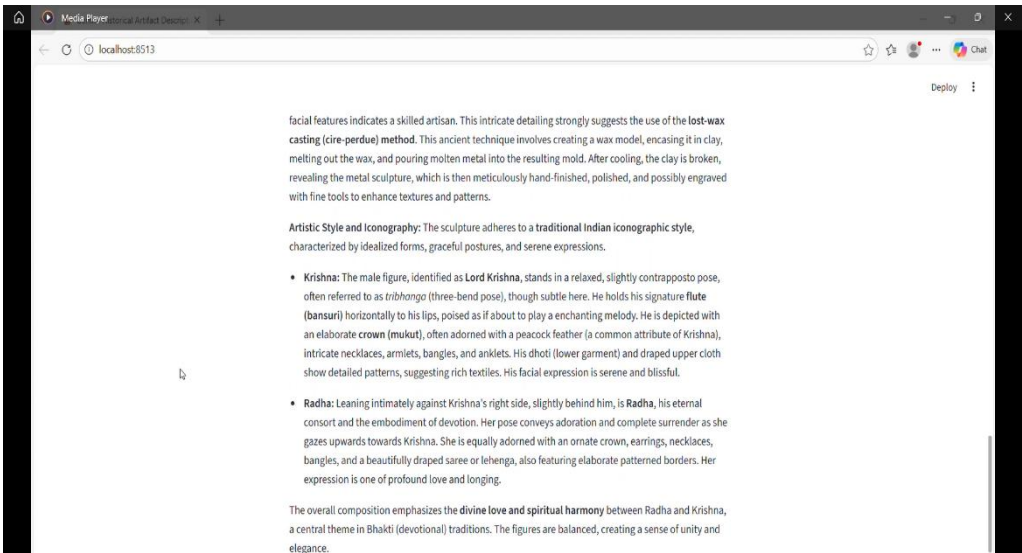

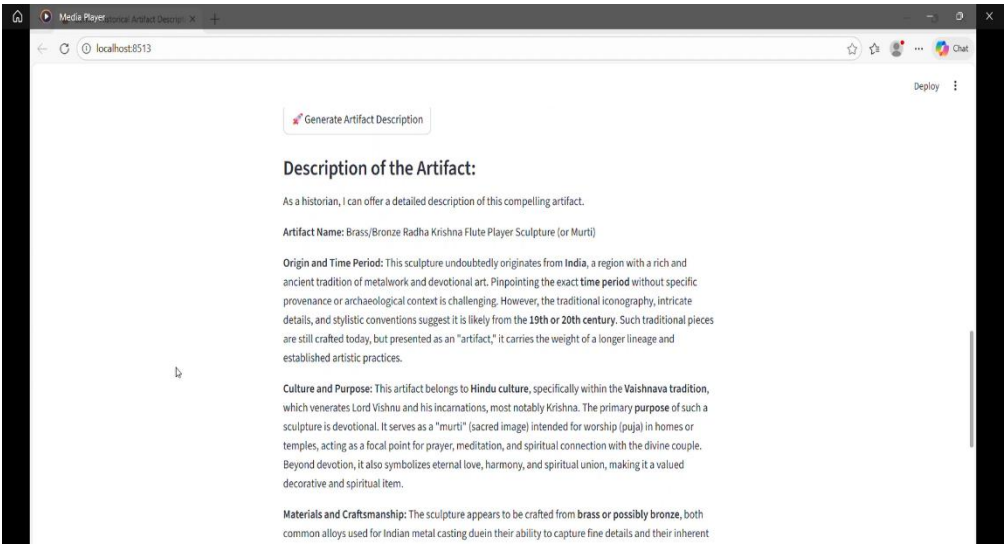

```

**Step 4:** After opening this portal it displays the Gemini Historical Description App, First we should type about any image description what ever we want contant in input prompt . It asks choose any image like wheather location etc. It generate based on the user inputs as shown in the following images

## **8. ADVANTAGES AND DISADVANTAGES**

### **Advantages**

- Generates artifact descriptions quickly and efficiently.
- Understands both images and text for accurate analysis.
- Saves time compared to manual research.
- Supports multiple languages for global users.
- Helps students and researchers in learning.
- Provides historical and cultural context.
- Can be integrated into apps and museum systems.

### **Disadvantages**

- May sometimes give incorrect or incomplete information.
- Accuracy depends on image quality.
- Cannot recognize very rare or new artifacts well.
- Requires internet connection to work.
- Cannot fully replace human experts.
- May have data privacy concerns.
- Depends on training data quality.

## 9. CONCLUSION

Gemini is a powerful and useful tool for generating descriptions of historical artifacts quickly and efficiently. It helps students, researchers, and museums by providing detailed information and historical context through image and text analysis. This saves time and makes learning easier and more accessible.

However, its accuracy depends on image quality and available data, and it may sometimes provide incorrect or incomplete information. Therefore, Gemini is best used as a supportive tool and cannot fully replace human experts such as historians and archaeologists.
